BRC RAM™ – VITAL SIGNS...

Consistent area split (sample frame)

60% Metro

20% Urban

20% Rural

Stations included

2016	2017	2018	
39	39	39	Commercial and PBS stations
274	264	266	Community stations

6 months sample:

An additional 5 stations can be reported in Q2Q3 as they have a sample greater than 40, with 6 moving off the reporting list.

WEIGHTING

A **skewed** sample can **distort** the **outcome**

1 Girl likes Pink

WEIGHT DATA

Results

20 girls like pink

So.....

All girls like Pink

7 boys likes Blue
3 boys like green

WEIGHT DATA

Results

12 boys like blue
8 boys like green

So.....

60% of boys like blue

BRC RAM sample **CLOSELY REFLECTS** the South African population

SAARF RAMS
(Unweighted)

 Black	56%
 Coloured	17%
 Indian / Asian	7%
 White	21%

BRC RAM
(Unweighted)

 Black	76%
 Coloured	12%
 Indian / Asian	4%
 White	8%

SA Population
(IHS)

 Black	78%
 Coloured	9%
 Indian / Asian	3%
 White	10%

WEIGHTING 101...

We weight to make our sample **LOOK LIKE THE UNIVERSE** the survey is meant to represent

REASONS WHY the sample drawn is not completely representative of the universe:

1. Drawn sample does **NOT FULLY MATCH** the population (e.g. disproportionate area sample in RAM – METRO = 60% / URBAN = 20% / RURAL = 20%)
2. To compensate for **NON-RESPONSE OR OVER-REPRESENTATION** of sub-groups (e.g. race or gender)

To weight means that we **MULTIPLY EACH RESPONDENT** by a factor to either increase or decrease their contribution to the total. In other words, to get them back into the **CORRECT PROPORTIONS AS PER POPULATION**

THE SAMPLE...

Metro

Urban

Rural

**Sample
Frame:**

Population:

BRC RAM Weighting Process

- 1 Start with all weighting variable cells
- 2 Check sample size for all possible weighting variable cells
- 3 Combine cells with low samples/zero cells
- 4 Calculate population size for each RIM weight
- 5 Checks on applied weights – weighting input, convergence individual weights, weighting efficiency

BRC RAM WEIGHTING VARIABLES...

Province

GP = Gauteng
KZN – KwaZulu Natal
WC = Western Cape
EC = Eastern Cape
LP = Limpopo
MP = Mpumalanga
NW = North West
FS = Free State
NC = Northern Cape

Area

R = Rural
U = Urban
M = Metro

Population Group

B = Black
C = Coloured
I = Indian
W = White

Gender

F = Female
M = Male

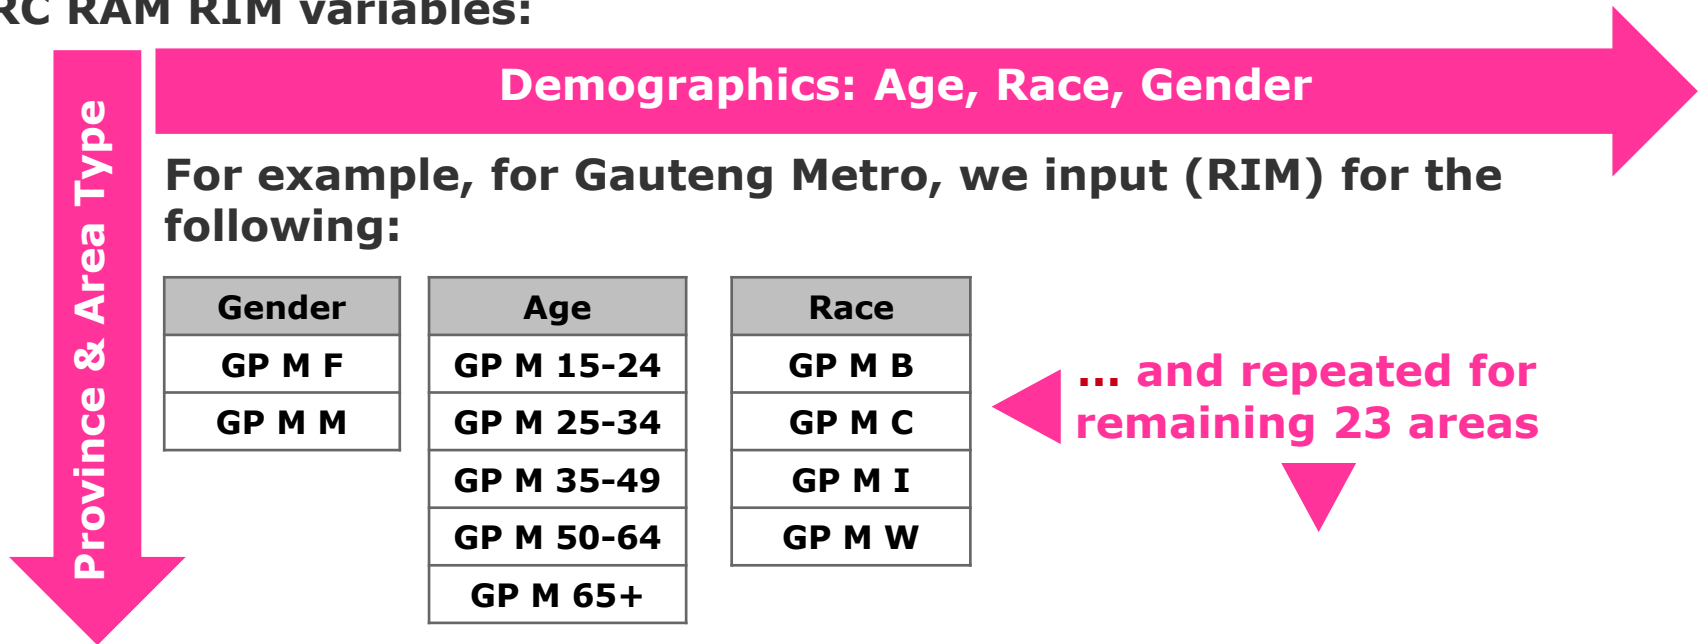

Age

15-24
25-34
35-49
50-64
65+

RIM WEIGHTS...

BRC RAM RIM variables:

WEIGHTING CALC EXAMPLE (to population)...

$$\text{Weight} = \frac{\text{Want}}{\text{Got}}$$

	IHS Population	Actual sample	Weight
Black	31,085,000	250	124,340
White	3,700,000	150	24,667
Coloured	3,606,000	100	36,060
Asian	1,082,000	100	10,820

How do we know whether these weights are too high?
Need to check against **SAMPLE BALANCE WEIGHT**

WEIGHTING CALC EXAMPLE (to population)...

$$\text{Weight} = \frac{\text{Want}}{\text{Got}}$$

	IHS Population	Our sample	Weight	Sample balance weight
Black	31,085,000	250	124,340	1.8900
White	3,700,000	150	24,667	0.3749
Coloured	3,606,000	100	36,060	0.5481
Asian	1,082,000	100	10,820	0.1645
Total	39,473,000	600	65,788	1.0000

$$\frac{124,340}{65,788} = 1.8900$$

The **SAMPLE BALANCE WEIGHT** basically provides an “effective weight”, i.e. shows to what extent we had to re-proportion the sample to match the universe

How do sample size changes impact the weighted output?

If a **RIM is locked**, the weighted output will be **consistent**

For example **Gauteng Metro** Race (each race group has its own RIM):

Sample base size (n=)	Jan-Jun'16	Apr-Sep'16	Jul-Dec'16
B	9,333	9,463	8,867
W	1,208	1,313	1,001
I	320	298	148
C	360	340	312

Weighted output ('000s)	Jan-Jun'16	Apr-Sep'16	Jul-Dec'16
B	6,560	6,560	6,560
W	1,280	1,280	1,280
I	292	292	292
C	301	301	301

How do sample size changes impact the weighted output?

If a RIM is NOT locked, the weighted output will differ depending on the base size

This occurs most often when cells are collapsed

For example Gauteng Urban Race (Black had its own RIM, WCI had its own RIM):

Sample base size (n=)	Jan-Jun'16	Apr-Sep'16
B	825	884
W	81	54
I	11	11
C	13	17

Weighted output ('000s)	Jan-Jun'16	Apr-Sep'16
B	1,207	1,207
W	210	181
I	26	26
C	28	58

WEIGHTING...

Average weighting efficiency

JAN'17- JUN'17	APR'17- SEP'17	JUL'17- DEC'17	Oct'17- Mar'18	Jan'18- Jun'18	Apr'18- Sep'18
89%	88%	88%	87%	87%	86%

**Weighting is not a 'corrective' factor,
it is a 'sample balancing' factor**

*BRC RAM has high **efficiencies**, meaning
results are more reflective of the **SA**
population*

KEY STATION MEASURES (THE CURRENCY)

JAN'18-JUN'18
APR'18-SEP'18

SIGNIFICANCE CALCULATOR

JAN'18-JUN'18
APR'18-SEP'18

THE BRC RAM SIGNIFICANCE CALCULATOR

How do I know if the results for my Station Listenership has **significantly increased** or **decreased** from **Jan'18–Jun'18** to **Apr'18-Sep'18**?

1. Go to the BRC website: www.brcsa.org.za

2. On the Menu, hover with your mouse over the Radio Research and click on the BRC RAM Significance Calculator

Confidence Interval

Significance Test

3. On the top left hand side of the screen, choose the tab called **"Significance Test"**

4. Look under the most recent BRC RAM surveys and choose the 2 Survey Periods you want to compare
eg. Survey Period 1: Jan'18 – Jun'18 & Survey Period 2: Apr'18 – Sep'18

5.1 **For Survey Period 1: Jan'18 – Jun'18**

- Choose the Sample Size, n=30 440
- Choose the Population Size, n=39 473
- Choose your Station Listeners from your report in '000s

5.2 **For Survey Period 2: Apr'18 – Sep'18**

- Choose the Sample Size, n=30 418
- Choose the Population Size, n=40 073
- Choose your Station Listeners from your report in '000s

6. **Follow the instructions and:**

- Input the Sample Size, Population Size and your Station Listeners for Period 1
- Input the Sample Size, Population Size and your Station Listeners for Period 2
- Press Enter

7. **Look under Results for the Output:**

- "The change in listenership is **Not Significant** at the 95% confidence level" OR
- "The change in listenership is **Significantly Lower** at the 95% confidence level"
OR
- "The change in listenership is **Significantly Higher** at the 95% confidence level"
